Nubian Ibex (*Capra ibex*), Texas, USA.

Spanish x Boer goats, Texas, USA.

Predation

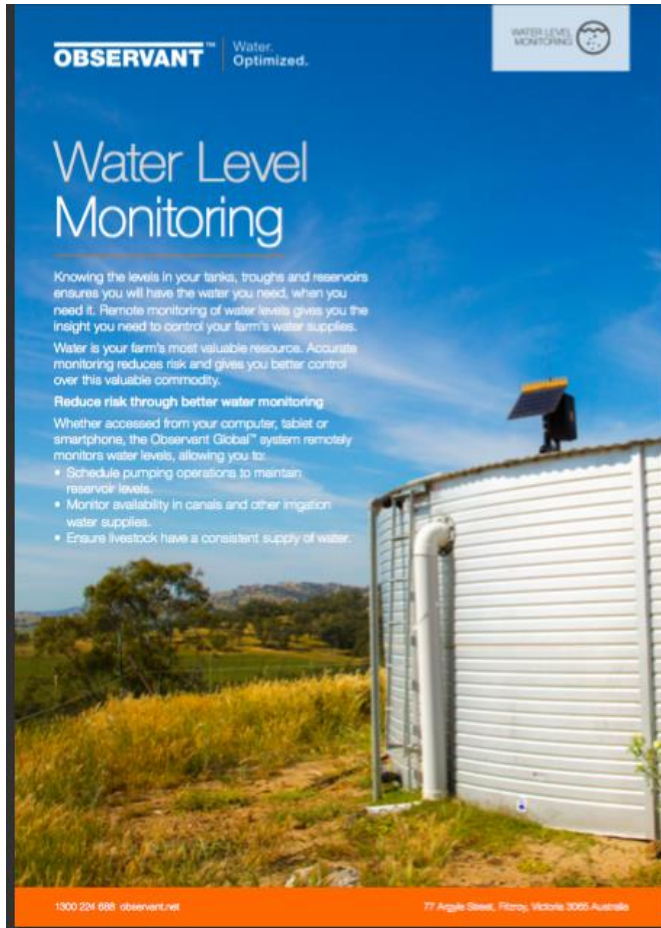

Jackal trap,
South Africa.

Maremmas,
Brazil.

Donkey,
USA.

Efficiencies: Technology

OBSERVANT™ Water. Optimized.

Water Level Monitoring

Knowing the levels in your tanks, troughs and reservoirs ensures you will have the water you need, when you need it. Remote monitoring of water levels gives you the insight you need to control your farm's water supplies.

Water is your farm's most valuable resource. Accurate monitoring reduces risk and gives you better control over this valuable commodity.

Reduce risk through better water monitoring

Whether accessed from your computer, tablet or smartphone, the Observant Global™ system remotely monitors water levels, allowing you to:

- Schedule pumping operations to maintain reservoir levels.
- Monitor availability in canals and other irrigation water supplies.
- Ensure livestock have a consistent supply of water.

Outcomes

- Australia is unique, however so are many other countries.
- Research, research, research...
- Many options, pivot on land/country type and market access.
- Capitalise on your skills.

Recommendations

- Inputs = savings.
- Look to improvements.
 - What is next?
