

# Controlling worms in beef cattle

An update on diagnosis, treatment and production benefits

Webinar/Phone Seminar

AGRICULTURE VICTORIA

Join us for an up-to-date discussion on the control of parasites in beef cattle including the latest developments in diagnostics and treatment.

## **PRESENTER AND TOPIC:**

**Matt Playford, Dawbutts Pty Ltd**

Matt is the Managing Director of Dawbutts Pty Ltd, a company that runs a parasitology laboratory that conducts research on behalf of the livestock industry. He has a special interest in livestock parasite diagnostics and anthelmintic resistance.

Worms have a big impact on the health, welfare and productivity of beef cattle herds. As they live in the internal organs, they are difficult for farmers to see, diagnose and control. Learn how recent advances in diagnostic methods have made testing more accurate, faster and cheaper.

At the conclusion of the presentation participants will have the opportunity to ask questions.

This is a free event.

## **DETAILS**

**DATE: Wednesday June 10**

**TIME: 7.30 pm to 8.45 pm**

**VENUE: Online or via phone**

For those unable to join the webinar platform, a phone service is available, the details are on the registrations page.
