# Improve your client services by building your skills in interpreting seasonal forecasts

Seasonal forecasts can assist livestock producers make informed decisions about feed supply and demand and provides the ability to respond to seasonal conditions early.

This webinar will provide advisors Australia-wide with the key steps to interpret forecasts so they can better support the producers they work with.

Dale Grey is a seasonal risk agronomist with Agriculture Victoria where he has worked for 27 years. Dale provides agronomy, climate and weather analysis for farmers, agribusiness, government and the media. He has been interpreting climate models from around the world every month since 2008.

Dale is the author of the Fast Break climate newsletter, which summarises the monthly climate predictions of some of the world's biggest supercomputers down to a single A4 page. This is complemented by his monthly Very Fast Break YouTube clips.

Building skills in using and interpreting seasonal forecasts
