FIELD DAY THEMES AND PRESENTERS

Rehydrating central Australian landscapes can lead to improved production and biodiversity.

Peter Andrews

OAM, Agricultural Pioneer and inventor of the Natural Sequence Farming (NSF). Will explain how landscapes function and the principles of NSF.

Tim Wiley

Tierra Australia will explain how to undertake a catchment function analysis on a property.

Lance Mudgway

Mulloon Institute will explain and demonstrate the NSF Landscape Rehydration methodologies eg how to design and plan out contour banking and leaky weirs.

Col Stanton

Well renowned local soil conservation practitioner will demonstrate the construction of contour banks and how to treat erosion along station tracks and fence lines.

Local Practitioner

Demonstrate how to harvest and sow native grass seed.

The amazing landscapes of central Australia – natural assets that support animal production and wildlife

The Department of Industry, Trade and Tourism (DITT)

Rangelands team will explain the landscape features of Central Australia and the arid zone's productivity.

Peter Jobson

Alice Herbarium will show how to identify native grasses in the field.

Emily Hinds

Territory NRM will help you discover what makes a healthy soil and its importance for maintaining healthy vegetation cover, water quality and production.

A project delivered by Landcare NT and Centralian Land Management Association with funding from the Australian Government's National Landcare Program

Our Sponsors

Innovative technologies available for central Australian land managers

Peter Jacklyn

Charles Darwin University is the Service Manager for the North Australian Fire Information system and will explain how it can be used as an important land management tool.

Chelsea Jarvis

Climate Mate will explain how this important tool can be used for planning for climate change and resilience.

Practice change can lead to improved productivity, biodiversity and landscape resilience.

Bruce Maynard

Leading agriculture innovator and grazier from Narromine in NSW will explain Self Herding, a behaviour-based livestock management approach.

Department of Environment Parks and Water Security (DEPWS)

Rangeland Monitoring will explain all about monitoring pastoral leases and how to measure changes in the landscapes.

Jane Mack

The National Recovery and Resilience program will explain the program and support and assistance measures available to land managers in central Australia.

Chris Brown

DEPWS Weed Management Branch will talk about the biosecurity aspects of weed management.

Lee Gleeson

Bushfires NT will talk about fire management for environment and asset protection in central Australian landscapes.

The Department of Industry, Trade and Tourism (DITT)

Rangelands team will discuss the value of the carrying capacity equation components.

A project delivered by Landcare NT and Centralian Land Management Association with funding from the Australian Government's National Landcare Program

Our Sponsors

Conservation programs on central Australian landscapes – potential for income diversification and environmental services

Doug McNicholl

Meat and Livestock Association will unravel the mysteries around the carbon industry and how land managers and the environment in central Australia could benefit.

Peter Burgess

Tierra Australia will explain all about natural capital and the emerging market opportunities for land owners with natural assets on their land holdings.

A project delivered by Landcare NT and Centralian Land Management Association with funding from the Australian Government's National Landcare Program
