

Measured Goats FIELD DAY

Delivering modern genetic selection tools to lift productivity in your production system.

250,000 data records collected from 5,421 research-bred progeny and 1,329 goats sourced from industry have provided new **opportunities we'll explore:**

- ✓ **Selecting bucks with EBVs and gBVs -**
How much variation is out there, and what difference can selecting the right ones make to your bottom line?
- ✓ **Lifting reproductive efficiency with genetics -**
Your first look at the variation amongst the Cohort 1 sires' daughters for conception, litter size and survival.
- ✓ **Crossbreeding and hybrid vigour -**
We'll quantify the benefits of hybrid vigour, explore optimising crossbreeding, and highlight the value of the rangeland doe.
- ✓ **Predicting performance with genomics -**
How close are we to selecting better bucks with a tissue sample and a \$50 test?
- ✓ **Thinking about goatmeat after you slide the stock crate gate -**
From variation to value: turning carcass differences into a market advantage.

**Wednesday 16
September 2026**

8:30am–4:30pm
(Registration from 8 am)

**Condobolin Agricultural
Research and Advisory
Centre**

152 Fifield Road, Condobolin
NSW 2877

See the science. Taste the results. And much more

- Compare sire lines and high-and low-growth genetics
- Join in a goat BBQ masterclass
- See how to assess key visual traits
- Discuss goat health with leading goat veterinarians
- See the autodrafter and bulk handler in action
- Explore industry trends
- Network and socialise at the Railway Hotel after the event

Measured Goats is funded by NSW Department of Primary Industries and Regional Development and Meat & Livestock Australia.
