

# Less mites, more feed

## Final webinar

 **18 March 2026 | 6pm (UTC+11:00, Australia/Melbourne)**

 **Online via Microsoft Teams**

Redlegged earth mites (RLEM) are a widespread pasture pest that can significantly reduce pasture establishment and early feed availability. The 'Less Mites, More Feed' Producer Demonstration Site project has been working with Victorian producers to improve the monitoring and management of RLEM in pasture systems.

Join us for this final webinar to learn:

- How to identify and monitor redlegged earth mites
- Effective management and control strategies
- How to use the TIMERite® spraying date for optimal impact

This short, practical session will help you improve early-season feed availability and strengthen pasture performance.
