

AI in agriculture workshop

11 August 2026
Northam, WA

Join fellow livestock advisors for a practical, hands-on half-day workshop focused on how artificial intelligence (AI) can support and enhance your advisory work.

Designed specifically for livestock advisors, this session will explore real-world applications of AI that can help you save time, improve productivity, create better client resources and streamline everyday tasks. Through demonstrations, guided activities and discussion, you'll learn how AI tools can assist with everything from preparing reports, analysing information and communicating with clients.

Whether you're completely new to AI or already experimenting with it, you'll leave with practical skills, useful tools and ideas that you can start applying in your business straight away.

This workshop is about practical outcomes, not technical theory - helping you work smarter so you can spend more time delivering value to your clients.

Time 12.00pm–5.00pm

Cost \$50 (inc. GST)
