

Feed365 – Designing a year-round feedbase for WA sheep

PDS Updates webinar series

 **11 June 2026 | Time: 12pm (WA)**

 **Online webinar – Microsoft Teams**

Build a more resilient and productive sheep enterprise with smarter, year-round feedbase planning.

Join MLA for the latest PDS Updates webinar, sharing practical insights from the SheepLinks Feed365 project in WA. This online session explores how diverse forage systems can support more resilient and profitable sheep enterprises by providing feed across the full production year.

Hear from DPIRD's Daniel Real and Paul Sanford as they discuss trial outcomes from four years of Feed365 research, including which forage species performed best in key seasonal feed gaps and how producers can adopt these options — whether making small, targeted changes or redesigning part of their feedbase.

What you'll learn

- How carrying capacity increased in trial systems from ~9DSE/ha for winter and spring to 10 DSE/ha all year round - without supplementary feed
- Which pasture and forage mixes performed best across key seasonal feed gaps
- How alternative species can help manage variable seasons and smooth feed supply
- Practical establishment and management tips for new forage species
- What a redesigned, year-round feedbase could look like — and why it doesn't have to be all-or-nothing.

Speakers

- Daniel Real, DPIRD
- Paul Sanford, DPIRD
