

SA Livestock Sustainable Solutions Program

Led by the Department of Primary Industries and Regions (PIRSA) with Meat and Livestock Australia (MLA), the SA Livestock Sustainable Solutions Program is a three-year project aimed at helping South Australian red meat producers better understand, measure, and manage their emissions. Through the demonstration and application of practical on-farm strategies, including technology, peer-peer learning, building awareness and capability in establishing carbon baselines.

The program is fostering 6 resilient, sustainable and profitable sheep and cattle enterprises across the state. Representing 4 target zones to ensure applicability and available opportunities.

- High rainfall
- Medium rainfall
- Low rainfall
- Pastoral zones

Six regional demonstration sites are measuring their on-farm emissions and implementing emissions reduction practices and technologies to evaluate on-farm efficiency.

Demonstration sites

West Ella Pastoral		
South Australian Cattle Co. Pty Ltd-East Park		
Mamblin Pastoral		
Thomas Foods International		
J.D and B.C Henderson		
Willangi Pastoral Company		

Sustainable solutions producer groups

Through peer learning, practical extension, and tailored support, producers will:

- monitor emission profiles
- explore management strategies
- make informed decisions that align with their productivity and sustainability goals.

Participating producers will implement emissions-related practice changes and develop an on-farm action plan to increase knowledge and awareness.
