

MARKET SNAPSHOT | SHEEPMEAT

apan

Japan has been a stable and consistent buyer of Australian sheepmeat and is our largest chilled lamb customer within Asia. Its affluent and highly urbanised population is expected to continue demanding imports of high quality proteins, and Australian sheepmeat has opportunities to further expand its presence beyond Genghis Khan (sliced lamb shoulder cooked on a table-top grill).

Challenges and opportunities in Japan for Australian sheepmeat include:

- Ongoing akami-niku (leaner meat) trend and growing interest in global cuisine supported growth in lamb demand, with Australian exports to the market showing the highest volume on record since 2008-09.
- Japanese consumers generally have positive perceptions towards lamb, despite its minor presence and perceived lack of versatility as a protein. Increasing awareness and familiarity for lamb among consumers remains crucial to unlocking future
- In the foodservice sector, there is a growing number of urban restaurants incorporating Australian lamb on their menu. They

they offer a key opportunity for Japanese consumers to become more familiar with, and consider purchasing, Australian lamb in the retail environment.

- Japan imports the majority of its sheepmeat requirements, and as the largest supplier, Australia is well placed to capture any growth in the sheepmeat market. That said, competition from New Zealand (NZ) remains strong, particularly in the retail channel.
- There are currently no sheepmeat import tariffs or volume/ technical access issues into Japan.

Consumers

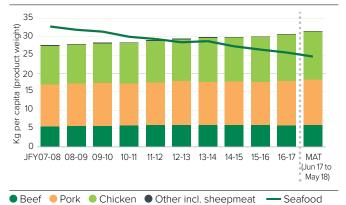

- Japanese consumers appreciate lamb's eating quality, which resonates with the market's tradition of seeking a variety of foods that deliver enjoyment, but also nutritional balance in the diet.
- However, consumers also think lamb is hard to buy and not as versatile as other proteins (Source: MLA Global Consumer Tracker Japan, 2018). Making lamb more accessible in an everyday environment remains a priority in a market where people place great emphasis on convenience, underpinned by the country's ageing population and increasing number of single/two person households.

Attributes important for all proteins and lamb associations

What attributes are important for Japanese consumers (all proteins)?	What associations do consumers have to lamb?				
My/my family's favourite	Tastes delicious				
Easy to prepare	Low in fat				
Consistent quality standards	High nutritional value				
Easy to purchase	Meat is tender				
Meat is tender	My/my family's favourite				
Source: MLA Global Consumer Tracker Japan, 20	018				

 Japanese protein consumption is diverse, but per capita sheepmeat consumption is extremely low, indicating scope for future growth. There has been an ongoing shift from seafood to meat proteins, however the growth so far has been captured by chicken and pork.

Protein consumption per capita

 Japan's population and economic growth prospects are subdued in comparison to many neighbouring markets in Asia. That said, a high number of wealthy households concentrated in major cities, coupled with sophisticated supply chain infrastructure, provides businesses with easy access to large groups of potential customers.

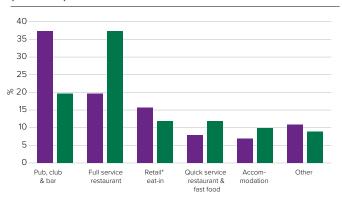

Australian chilled mutton is served and appreciated as a delicacy in sheepmeat specialised restaurants in Japan

Foodservice

- Australian lamb consumption to date has been largely led by Genghis Khan outlets. Coincidentally, the Tokyo metropolitan area is seeing an increasing number of non-Genghis Khan, mid to high-end restaurants serving lamb as a point of difference. Grilled meat and global flavours are becoming increasingly popular among Japan's sophisticated urban professionals, fuelling the emergence of these restaurants. Concurrently, Japanese chefs who have developed an appreciation for Australian sheepmeat
 – including a group of 'Lambassadors' under the MLA marketing initiative – are also underpinning the diversification of sheepmeat in the dining scene.
- Genghis Khan restaurants are particularly popular in Hokkaido (the north island of Japan) among locals and visiting tourists. New Genghis Khan venues have opened in major cities as well, largely focused on young consumers. Lamb is regarded as healthy and topical among young social media followers, with some restaurants offering both Genghis Khan and shabu shabu hot-pot style, or/and serving chilled lamb only to promote its high quality.
- The Japanese foodservice sector is estimated to be worth over US\$289 billion, including cooked food sales by retail outlets*¹ (Source: Japan Foodservice Association, 2016 data). Full service restaurants are a clear leader in value, and the majority of Australian lamb is consumed in this channel. Lamb uptake by the retail and quick service/fast food categories has been limited to date, largely due to its higher cost compared to other proteins.

* Retail includes cooked food sold by supermarket, convenience stores and take out specialists

^{*}¹This category is called nakashoku and consists of delicatessen and take away food sold at supermarkets and convenience stores).

Retail

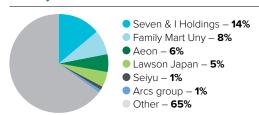

· Lack of familiarity, availability and knowledge of how to cook lamb are major reasons for Japanese shoppers not purchasing lamb in the retail channel (Source: MLA Global Consumer Tracker Japan, 2018). Subsequently, Japanese-style lamb recipes and marinated products using Japanese flavours are perceived as more 'accessible' than western-style dishes and are more popular among shoppers. When at the shelf, consumers look for markers of guaranteed safety, freshness, and value (Source: MLA Global Consumer Tracker Japan, 2017).

Introducing Australian lamb with Japanese flavours - Spicy lamb soba noodle.

· Lamb's retail presence is small compared to other proteins, particularly in the very competitive and fragmented Japanese retail environment. Major retailers in Tokyo are gradually increasing their shelf space for lamb, but NZ has a competitive presence in the sector with its smaller-sized bone-in (lamb cutlet) products. Country of origin labelling is mandatory at Japanese retail level, and provides opportunities to promote Australia as a safe, trusted and quality supplier of sheepmeat.

Grocery retail market shares – 2018

Small but creative butchers are offering a range of products.

Other suppliers

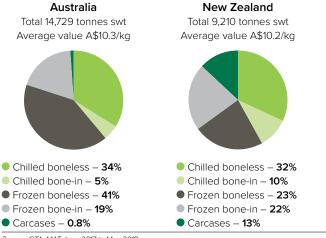

- The Japanese sheepmeat industry remains very small*² and hence sheepmeat demand in Japan has been, and will continue to be, filled by imports.
- Australia is the dominant imported sheepmeat supplier to Japan with a 60% share of imports, but is facing strong competition from NZ which has the same access conditions.

Sheepmeat imports by supplier

Sheepmeat imports into Japan by category

Source: GTA, MAT June 2017 to May 2018

In focus - New Zealand

NZ and Australia are two major exporters of sheepmeat in the global market. NZ exports about 300,000 tonnes swt of lamb every year, and is heavily focused on EU and China markets where the supplier has advantageous access conditions over Australia.

 $^{^{*2}}$ Last production data recorded in Japan was 2009, at 184 tonnes cwt.
