

GLOBAL SNAPSHOT I GOATMEAT

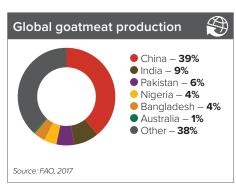

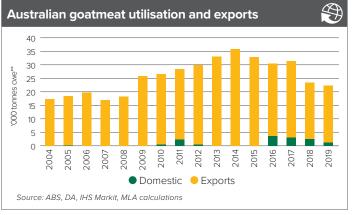

Goatmeat is widely consumed around the world but remains a largely niche part of many consumers' diets, in demand mostly among key ethnic segments. Per capita consumption varies greatly between countries and is largely underpinned by local production as well as tradition. While population growth and increasing household wealth provide a broadly positive outlook for global meat consumption, Australian goatmeat needs to overcome some 'key barriers to purchase' to tap into opportunities in developed markets.

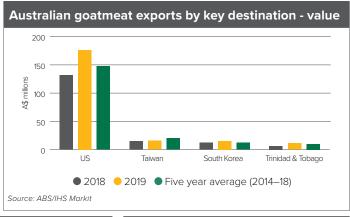

- Goatmeat, when compared to other proteins, has the advantage of no religious taboos and, in some cultures, has a unique role in religious and traditional family events.
- Its niche status can be considered a challenge, but also an opportunity in markets where there is potential to dial up health and nutritional credentials.
- Consumers' lack of familiarity with goatmeat and consequent low confidence preparing it remain challenges for goatmeat across many markets.
- Australian goatmeat production and exports are exposed to the somewhat volatile supply of the rangeland goat flock and seasonal conditions.
- Goatmeat is considered most suitable for slow, wet cooking methods like curry, and as such is strongly associated with Indian, Pakistani and Nepalese cuisines. On menus, goat is often interchangeable with sheepmeat and other red meats (Source: GlobalData Foodservice Menu Intelligence, 2017).

Australia

Production and supply

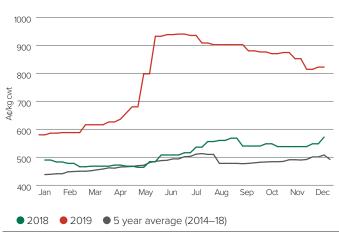

- The majority of goatmeat is harvested from semi-wild rangeland goats. A 2017 survey of NSW goatmeat producers found that 71% of the 454 enterprises producers who responded had a harvest enterprise, while 29% operated a managed or semimanaged enterprise (Source: NSW SPI/MLA Goat Industry Data Collation and Tracking Project, 2017).
- Australian goat slaughter fell by 7% year-on-year to 1.54 million head in 2019. The persistent poor seasonal conditions saw slaughter ease across all states. Victoria produced the highest slaughter figures for 2019 at 825,416 head, followed by Queensland (377,634) and SA (234,064).

Australian goat slaughter and carcase weights

- Goat production in 2019 was 4% lower on the previous year, totalling 22,381 tonnes carcase weight (cwt). Average carcase weights lifted 8% year-on-year, to 15.3kg/head in 2019, offsetting some of the decline in slaughter.
- Goat over-the-hook prices reached record levels in 2019, peaking in late June at 940¢/kg cwt, and averaging 790¢/kg for 2019.

Goat over-the-hook prices

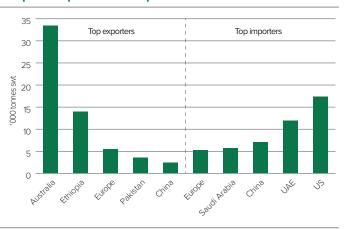

Source: MLA's NLRS

Exports

 Globally, Australia is a minor producer of goatmeat but one of the largest exporters. Australian goatmeat is almost exclusively (98%) exported as a frozen whole carcase (Source: DAWR).

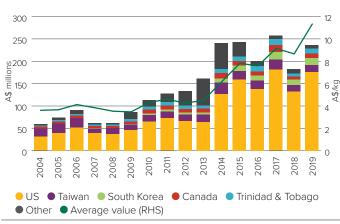

Top five exporters and importers

Source: FAO, 5 year average (2012–2016)

- Goatmeat shipments saw a slight increase in 2019, increasing by 1% year-on-year to 21,248 tonnes shipped weight (swt). Australian goatmeat exports were valued at \$235.7 million in 2019, up 29% on 2018.
- The US remains the key market for boxed goatmeat, accounting for 70% of exports by volume in 2019. Taiwan, Trinidad and Tobago, South Korea and Canada are also consistent importers of Australian boxed goatmeat, while Malaysia is the main destination for live trade.
- There are markets that have higher goatmeat consumption, than Australia's major markets, however, generally it's of cheaper local product.

Australian goatmeat exports by value

Source: IHS Markit

• Live goat exports accounted for only 3% of total export value in 2019, at A\$7.0 million. Malaysia is the major export destination for Australia's live goat trade, typically taking between 85% and 90% of total exports up until 2016. This marked the beginning of a period of significant growth for domestic goat prices, which peaked in July 2017, making live goats far less competitive in Malaysia. This has seen a marked decrease in total live goat exports in years since, down to 21,580 head in 2018 and 16,059 head in 2019, a decrease of 82% on 2015 levels (87,676 head).

Australian goat market summary

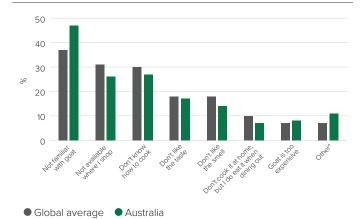

Calendar year	01	02	03	04	05	06	07	08	09	10	11	12	13	14	15	16	17	18	19

Australia - the market

- As in most developed markets, goatmeat is a niche protein in Australia, with approximately 10% of production utilised domestically.
- Among reasons why consumers don't buy goat, cultural familiarity is a key factor, with 47% of consumers saying they did not grow up eating goat or are not familiar with it.
- The goatmeat industry is well regarded among the Australian community, ranked the safest and best value of all meats (Source: Pollinate Project Daisy 9, 2018). However, most Australian consumers rarely eat goatmeat — although, one third of consumers would consider doing so (Source: MLA Domestic Consumer Tracker 2017).

Barriers to buying goatmeat

Source: MLA Global Tracker 2018, Australia
*Other includes "Goat is too fatty"

Meat goat breeds:

- Boer goat: a goat breed that has been specifically bred for meat. Recognised by their white bodies and distinctive brown heads. They are well suited to meat production and crossbreeding.
- Rangeland goat: a composite breed which has become naturalised throughout Australia's rangelands. They no longer have any strong resemblance to the original breeds of goats introduced with European settlement, having adapted to the Australian environment. (Source: GICA)

Potential success drivers for goatmeat in Australia

These drivers have been successful among other secondary proteins such as turkey, kangaroo and duck.

- **1. A bit special** giving consumers the opportunity and tools to make a restaurant-quality goat dish at home
- **2. New food culture** taking advantage of goat being a widely-consumed meat to kickstart a new trend
- **3. Seasonal suitability** finding a season to suit goat, like summer for seafood and spring for lamb
- **4. Health credentials** goat is lean, and not much of it is needed to impact a dish

(Source: MLA/DIJ Strategy, Value Adding Goatmeat for Australian Consumers 2017).

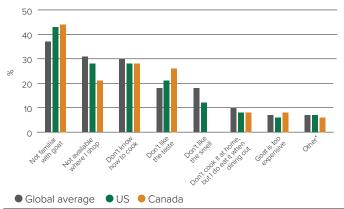

US and Canada

- North America has long been the largest and most important market for Australian goatmeat. This is set to continue, driven by population growth, demographic change and evolving consumer tastes. Although, as in all major markets, goatmeat remains a niche protein.
- The US accounted for 70% of Australian goatmeat exports in 2019, a total of 14,859 tonnes shipped weight (swt). Canada was also a significant market, accounting for 4% in 2019 (Source: DA).
- Exports to both markets have increased on the previous year, with exports to the US lifting by 4% and Canada by 13%, at 922 tonnes swt (Source: DA).

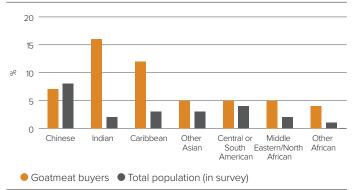

Barriers to buying goatmeat

Source: MLA Global Tracker 2018 (US), 2017 (Canada) *Other includes "Goat is too fatty"

- In 2019, total goatmeat imports to the US increased to 17,882 tonnes swt. Both Mexico and New Zealand saw large increases, both more than doubling exports, albeit off a low base, totalling 1,710 tonnes between them. Despite this, Australia remains the dominant player, with a share of 90% of imports in 2019 (Source: IHS Markit).
- Although goatmeat consumption is growing, goat remains a niche protein in North America, with a low 'share of mind' when it comes to meats consumers consider buying. The main reason for this is that many consumers are simply not familiar with goatmeat, having not grown up eating it as a part of their meat repertoire, and therefore don't know how to cook it.
- Those who buy goatmeat are likely to do so based on their own cultural experience. Goat buyers are likely to identify as having ethnic origin outside of North America, with a skew towards Indian, Caribbean and Middle Eastern backgrounds.

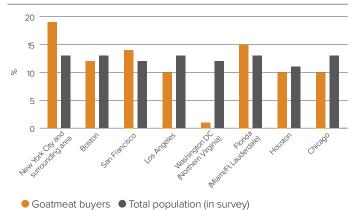

Ethnic background

Source: MLA Global Tracker 2018 (USA)

Many of those who have previously bought goatmeat are 'urban eclectics' – younger, urban, affluent consumers. Compared to the general population, they care more about novelty, variety, healthiness and animal welfare (Source: MLA Global Consumer Tracker 2017 and Midan "Marketing Consumer Segmentation" 2016).

Geographic distribution

Source: MLA Global Tracker 2018 (US)

- Goat buyers tend to be larger consumers and more frequent buyers of all meats, especially lamb – goat buyers are twice as likely to have also bought lamb in the past month (Source: MLA Global Consumer Tracker 2018).
- Goatmeat tends to be bought by those who love meat of all kinds and are looking to expand their tastes and cooking repertoires.
- Goatmeat is usually seen as interchangeable with mutton and even lamb among some groups. A survey of menus featuring goatmeat suggests it's typically used in curry, stew or other slow-cooked cuisines, often Indian or Nepalese, and frequently offered as a choice of meat alongside lamb or beef. Other cuisines where goatmeat features prominently include Caribbean, Mexican and Mediterranean.
- Goatmeat is increasing its presence on menus, with a 3% growth in penetration in all foodservice channels, and 34% in mid-scale restaurants in the US (from 2013–2017), but remains niche. As many consumers are largely unfamiliar with goatmeat, there are some restaurants using familiar dishes such as grilled goat, burgers and sandwiches (Sources: Datassential MenuTrends, 2017).

Taiwan

- In 2019, Taiwan was the second largest market for Australian goat exports behind the US – a position it has held since 2000 (except 2013). Australian goatmeat makes up almost the entire import market, with the only other importer being New Zealand.
- Goat is typically shipped to Taiwan as skin-on carcase. Higher prices, competition from other markets and limited supply of skin-on goat are the main contributing factors that have led to the recent fall in Australian goat meat exports to Taiwan.
- In terms of domestic production, the Taiwanese goat herd consists of mainly (~70%) purebred Nubian and Nubian-Boer crossbreeds (Source: Livestock Research Institute, Council of Agriculture, Executive Yuan).

Goatmeat compared to other proteins

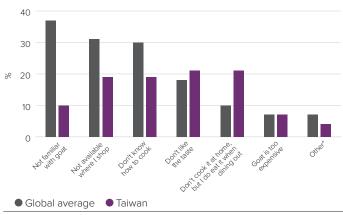

Strengths	Weaknesses				
Low in fat	Easy and convenient to purchase				
High nutritional value	My/my family's favourite				
The animal is well cared for	Can be used in many different meals				

Source: MLA Global Consumer Tracker 2016, Taiwan

 Typically consumed in restaurants, goatmeat contributes to a relatively small portion of the total protein consumed in Taiwan.

- Identified as a 'warming medicinal' food due to its ability to strengthen and warm the body, goat is typically served in specialised restaurants during winter and in slow-cooked dishes such as Chinese herbal stews and hotpots.
- Knowledge of how to cook and availability remain key challenges for goatmeat consumption at home.

Barriers to buying goatmeat

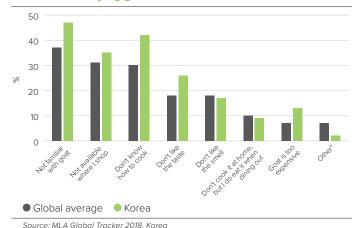

Source: MLA Global Tracker 2016, Taiwan *Other includes "Goat is too fatty"

Korea

- Although goatmeat is not a common protein in daily diets, it's
 consumed by many Koreans for medicinal purposes. Goatmeat
 is traditionally believed to have high nutritional value, the
 ability to help circulate energy, balance the yin and yang, and
 invigorate the body. It's increasingly consumed during the
 Sambok period (the hottest days in summer, from mid-July to
 mid-August) as a soup and is the prime substitute for some
 other niche proteins that have lost popularity.
- Korean consumers prefer skin-on goatmeat, which is typically served in specialised restaurants, and in slow-cooked dishes such as stews, soups, or boiled dishes. Familiarity and availability remain key challenges for goatmeat consumption at home.

Barriers to buying goatmeat

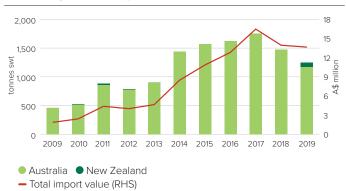

Goatmeat compared to other proteins

*Other includes "Goat is too fatty

Strengths	Weaknesses
Low in fat	Easy and convenient to purchase
High nutritional value	Tastes delicious
The industry is environmentally sustainable	Can be used in many different meals

- Korea is one of the world's largest online retail markets, but the use of the online retail channels for meat purchase remains limited due to consumer concerns about food safety, and a preference for seeing the meat before buying it. However, usage has grown recently on the back of rapid change in lifestyles and shopping habits of Korean customers online transaction value of agriculture, livestock and fishery products totalled approximately A\$4.4 billion in 2019, up 19% year-on-year (Source: KOSIS).
- Local or Australian goatmeat can be found on major online shopping platforms such as Gmarket, Auction and 11Street.
 Some online vendors have incorporated an introduction of cuts and cooking methods that suit Korean tastes, alongside the product listing, to boost consumer awareness.
- Goatmeat in Korea is derived from both domestic supplies and imports, with Australia being a long-standing key trading partner. Goatmeat imports from Australia reached a record high in 2017 (1,752 tonnes swt, up 9%); however, 2019 exports to Korea eased 10% from the year prior, totalling 1,214 tonnes swt. Australia is the dominant player in the Korean import market, accounting for 94% of imports on a volume basis (Source: IHS Markit, 2019).

Korean goatmeat imports

Source: Korean Customs and Trade Development Institution/IHS Markit

Trinidad and Tobago

 Trinidad and Tobago is a twin island located just off the northeastern coast of Venezuela in the Lesser Antilles. As well as being a major financial centre in the Caribbean, it remains Australia's largest trading partner in the region.

Australian goatmeat exports to Trinidad and Tobago

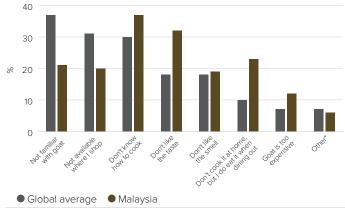

- The Caribbean Agricultural Research & Development Institute states that there are more than six million sheep and goats being raised on farms across the Caribbean, and meat from these small ruminants is a highly desirable commodity. Goatmeat cuisine is enjoyed throughout the Caribbean, often in the form of a traditional Indo-Caribbean curry goat dish, popular for celebratory occasions.
- In 2019, goatmeat contributed to a significant proportion of bilateral trade between Australia and Trinidad and Tobago, as Australia's largest export. Throughout the year, Australia exported 1,022 tonnes shipped weight (swt) of goatmeat to the country, valued at A\$10.9 million.
- The value of Australian goatmeat exports to Trinidad and Tobago, while coming off a low base, has risen steadily over the past decade. Although exports in 2018 saw a large decrease in volume (-43%), they bounced back in 2019 and export value of goatmeat has remained in line with Australian domestic overthe-hook prices.

Malaysia

- Goatmeat remains the least frequently consumed protein compared to other major meats. However, it can be widely used in place of other meats in a number of popular meat-based Malaysian dishes, such as curry and rendang (a slow-cooked dish of meat, spices and coconut milk).
- Goatmeat is consumed less at home due to a range of factors.
 It's consumed more at restaurants and celebration/ceremonial venues. Malaysia has a greater proportion of consumers surveyed claiming they don't buy and prepare goatmeat at home but do eat it when dining out, in comparison with the global average (Source: MLA Global Consumer Tracker 2018, Malaysia).

Goatmeat compared to other proteins

Strengths	Weaknesses
The animal is well-cared for	Easy and convenient to purchase
Guaranteed safe to eat	Essential part of children's diet
The industry is environmentally sustainable	Easy and convenient to prepare

Source: MLA Global Consumer Tracker 2017, Malaysia

- Malaysia relies heavily on imports for red meat supplies including goatmeat (more than 80%) (Source: Department of Statistics Malaysia). Australia has long been the largest supplier of goatmeat to the market.
- Malaysia is also the largest export market for Australian live goat. However, the surge in live goat prices has resulted in a dramatic decline in trade (down 92% to 6,900 head in 2019 from 82,477 head in 2015).
- Australia's high goat prices and tight supplies have led Malaysian importers to seek alternative, more affordable sources of live goat and other substitute products for goatmeat.
- Australian live sheep prices are more affordable and available than goat; furthermore, sheepmeat can be used interchangeably with goatmeat in many Malaysian dishes. Goat exports have increased marginally from 2017 levels; however, they remain still lower than sheep exports, with tightened supply and higher prices both contributing factors.

Australian live goat vs. live sheep exports to Malaysia
