At a Glance: Imported Beef Market

Market Situation

Market participants had mixed reactions to sales over the long weekend last week (Victoria Day on May 21). Some thought retail sales were quite good and this should help with new orders going into June. Others continue to note that imported beef inventories are heavy due to the relatively cold spring and weaker than expected demand from retail customers. Prices in the last two weeks have been steady although we have noted a weak undertone. Some end users noting lower prices were offered from overseas suppliers for lean and extra lean beef. Demand for imported cuts seen as quite robust while imported fat trim cannot compete with domestic values.

Imported Prices:

Imported prices for trimmings remain well below year ago levels. 90CL cow meat was last quoted at \$5.95 CAD/kg, 11% lower than a year ago. Bull meat was quoted at 6.46 CAD/kg, down 12% y/y and 85CL trim at \$5.71 was down 11%. While we are seeing some fat trim also quoted we think volumes are extremely thin. For instance, the last quote we have seen for imported 80CL trim was \$4.98 CAD/kg, which is the equivalent of \$1.75 USD/lb. This is modestly lower than prices paid in the US market for imported beef. And yet, the price of 81CL Canadian is currently as much as 40 cents per pound lower than imported product. In this environment, we think very little, if any, imported 80CL or fattier trimmings are coming to Canada.

Imported Beef Volume:

The charts to the right illustrate the volume of imported beef that has entered Canada so far this year. Frozen imports from Australia at 7,599 MT are up 27.9% compared to the minimal volume that came last year but still well short of the 31,000 MT available quota. Frozen beef imports from New Zealand through May 12 were 7,753 MT, 13.4% higher than last year. Chilled beef imports from the US remain the

At a Glance: Canadian Domestic Beef Market

Fed and non-fed Slaughter Trends:

Robust beef prices and larger inventories of cattle on feed have supported a higher slaughter rate in Canada in recent weeks. Seasonally slaughter in Canada increases in May, June and July, largely because warmer weather tends to bolster both retail and foodservice demand. In the four weeks ending May 12, steer slaughter in Canada averaged 27,256 head/week, 7.7% higher than the same four week period a year ago and 17.5% higher than the five year average. Heifer slaughter has also accelerated in recent weeks, a function of a big increase in heifer on feed inventories. In the last four reported weeks heifer slaughter has averaged 22,568 head/wk, 13.2% higher than last year and 9.9% higher than the five year average.

Seasonally cow slaughter numbers decline in March, April and May and that has been the case again this year. However, slaughter remains significantly above normal levels as big premiums for cow meat and weak calf prices induce producers to send more bulls and cows to slaughter. In the four weeks ending May 12 cow slaughter in Canada averaged 9,720 head/week, 27.6% higher than a year ago and 41.8% higher than the five year average.

Cattle on Feed Inventories

The strong marketing rate during March and April has helped Canadian feedlots stay fairly current. As of May 1, total on feed supplies in Alberta and Saskatchewan feedlots were 908,277 head, 0.6% lower than a year ago and just 0.5% higher than the five year average. Placements of cattle on feed in April were 108,209 head, 16% lower than a year ago. Cattle marketings last month at 120,724 head, were 15% higher than last year. Feedlots placed more light weight cattle on feed last fall so the supply of +120day cattle remains about 7% above year ago levels but the reduction in placements in the last four months will eventually reduce slaughter in the second half of 2018
