

Shelter and lamb survival 2025

Do you or have you ever thought about lambing into crops or shrubs?

We are currently seeking producers to host lambing comparisons over the next two seasons (2025 or 2026). At each site, we will **compare twin lamb survival** on a pasture lambing paddock vs. a crop and/or shrub lambing paddock.

Pasture lambing paddock

Vegetative cereal crop
lambing paddock

and/
or

Shrub lambing paddock

What this would involve:

- at least 50 twin-bearing adult ewes per paddock treatment.

Data collected:

- ewe condition score, feed-on-offer and nutritive value at the start and end of lambing
- lamb survival
- microclimates through lambing using remote weather stations.

For Expressions of Interest or general advice on lambing into crops or shrubs, please contact Georgia or Serina or alternatively click/scan the QR code:
